⁺Citizen

Jr. UX/IxD Designer

UX Design | Portland, OR | Full Time

JOB DESCRIPTION

Citizen, a design and technology company located in Portland, Oregon, is seeking a **Jr. UX/IxD Designer** to bring passion, curiosity, and raw talent to our talented team of designers. Our ideal candidate wants a challenge and is on a path to be an industry leading interaction designer.

We discover, we experiment, we perfect. We are driven by an intrinsic need to solve complex problems and make technology that works harder for people. We have a knack for syncing industry and technology with human needs, bringing companies and their customers closer together.

To be considered, you should have recently graduated and have a small history of interaction design projects.

Day-to-day responsibilities include:

- Collaborating effectively with Fortune 100 clients in a range of industries, securing approval on the team's ideas and solutions.
- Translating user goals, research, and business objectives into clear and compelling design solutions.
- Selecting and executing discovery exercises that familiarize clients with our process and set up the team for success.
- Establishing direction for projects and defining full interactive design specifications.
- Planning and delegating tasks required to successfully complete a project, while sharing leadership with a project's visual design lead.

To be considered, applicants must possess the following:

- Experience creating highly detailed wireframe flows and information architectures.
- Proven track record of creating concepts that are inspiring, imaginative, and implementable.
- Strong familiarity with considerations specific to mobile and responsive design.
- Ability to quickly learn and adopt new skills and processes.
- Masterful knowledge of Sketch, Adobe CS (InDesign in particular), and Keynote.
- Willingness to relocate to beautiful Portland, Oregon and, on occasion, travel for work.

While not required, the following skills would be really, really nice:

- Experience with mobile UX and other emergent connected technologies (IoT, wearables, etc.).
- Experience implementing user research and testing.
- Education or background in Interaction Design, HCI, and/or Design.
- Experience with HTML, CSS, and JS.

If hired, you'll be rewarded with a competitive salary and robust benefits package.

Please submit both a resume and portfolio that describes your process and demonstrates both design concepts as well as relevant wireframe flows for a variety of digital projects and platforms. Please include your reason for interest and salary requirements.
